

**MATERIAL  
HANDLING SOLUTIONS**

**GETTING THE JOB DONE**

**SAFELY**

Moving and storing materials may sound like a straightforward task, but the job comes with many risks. At ECCO, we understand the hazards of the material handling industry. And we aren't just talking about falling concrete or hoisting tons of steel. We are talking about visibility while handling raw materials, reversing safety when moving heavy goods, and proper lighting to illuminate a path while transferring products.

Employees are constantly transferring products from one place to another, and that can be very dangerous when the proper safety precautions haven't been put in place. In a fast-paced environment, it may be hard to hear a forklift moving goods. Additionally, workers might not be able to see moving equipment or gauge what is considered a safe distance.

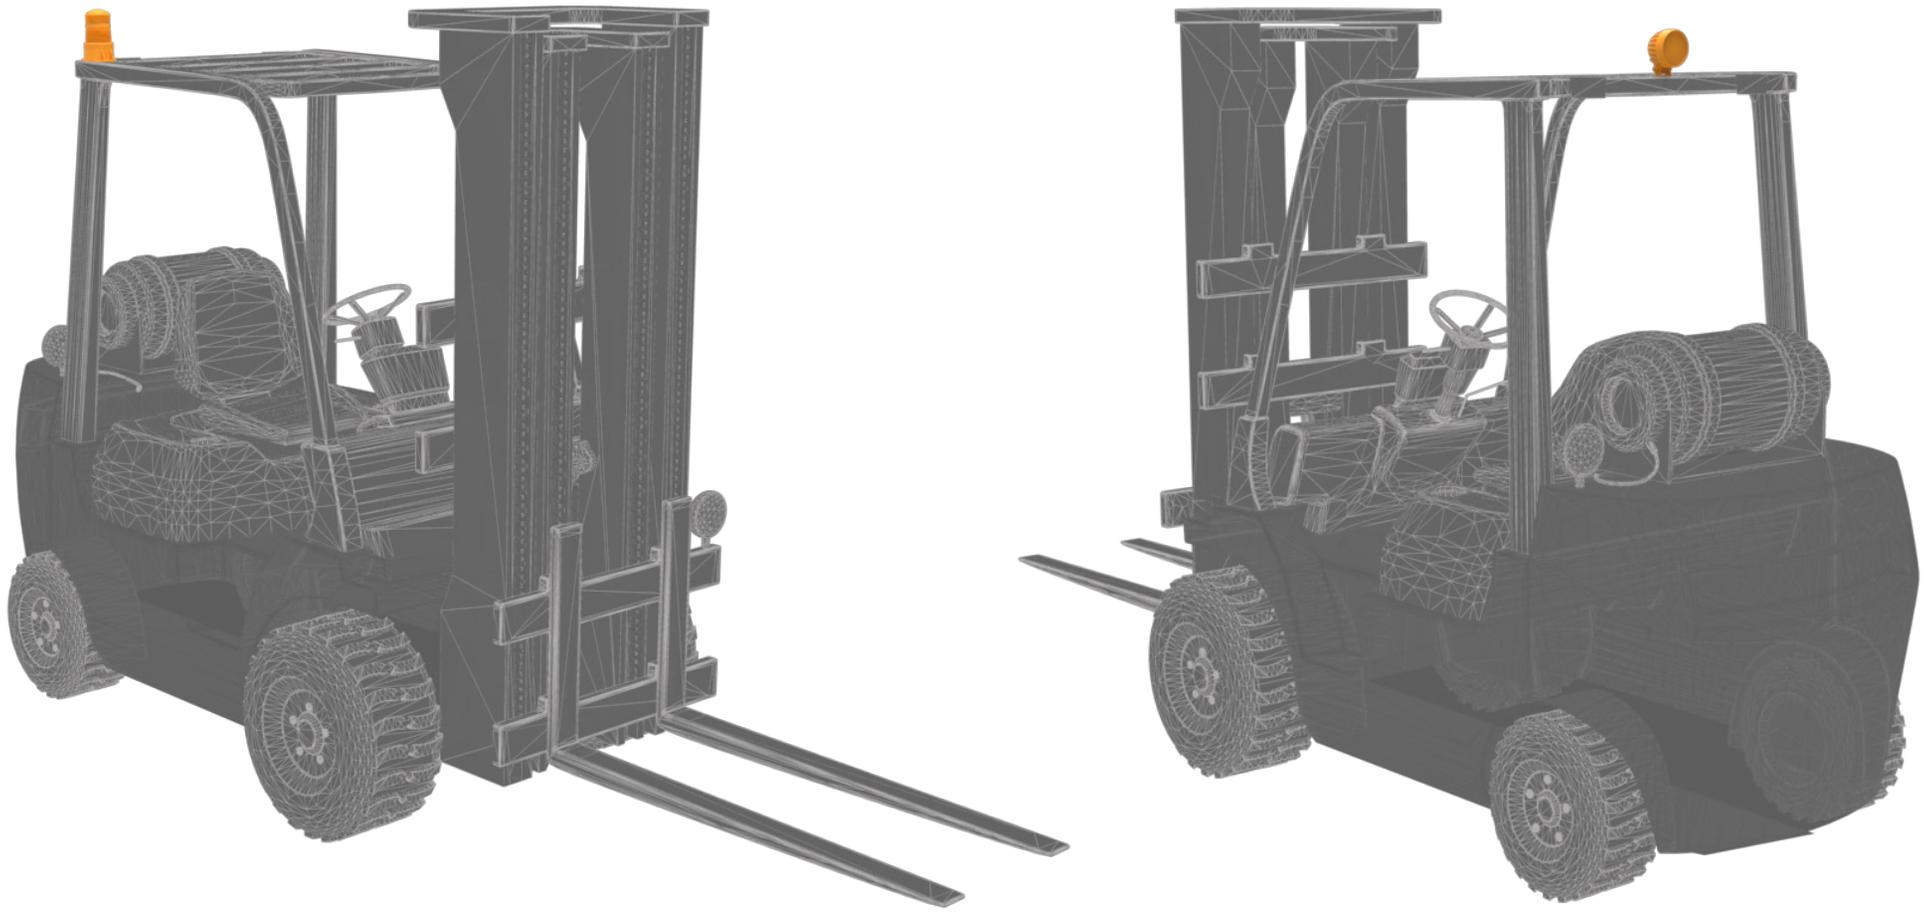

ECCO offers an extensive line of safety solutions that are ideally suited for any material handling job. Our high-intensity LED beacons notify other workers of a moving vehicle, while worklamps can illuminate the darkest of aisles in poorly-lit storage areas. ECCO's reversing safety solutions include a variety of back-up alarms including multi-frequency alarms and Smart Alarms. We make it our job to offer warning equipment to help minimize the risk of personal injury.
